

Career Branding Command Suite Project (Case Study)

Overview

This case study highlights my leadership in **AI-driven digital transformation, ERP integration, KPI governance, and supply chain innovation**. It demonstrates measurable impact across fleet management, procurement strategy, and operational excellence.

Key Challenges

- High fleet downtime impacting operational efficiency.
- Procurement cycles lacking resilience and cost optimisation.
- ERP migrations requiring compliance and scalability.
- Need for KPI governance frameworks to ensure measurable ROI.

Solutions Implemented

- **AI Adoption & Predictive Analytics**: Reduced fleet downtime by **10–15%** through predictive maintenance and optimisation.
- **ERP Systems Integration**: Directed migrations to **SAP, Oracle, and Azure DevOps**, ensuring compliance and resilience.
- **KPI Governance Frameworks**: Embedded governance achieving **95%+ compliance** across operations.
- **Lean Six Sigma & Agile Practices**: Streamlined procurement cycles and improved iterative transformation outcomes.

Measurable Outcomes

- **10–15% reduction in downtime** across fleet operations.
- **95%+ compliance** achieved through KPI governance.
- Strengthened **procurement resilience** ensuring sustainable profitability.
- Delivered **ROI through AI adoption and ERP integration**.

Leadership & Values

Beyond technical execution, this project reflects my commitment to **values-driven leadership**. Collaboration across engineering, BI, and executive teams ensured sustainable transformation outcomes.
