

Enterprise Architecture Flow - Career Branding Command Suite

Enterprise Architecture Flow

♦ 1. Data Layer (Inputs)

- **Career history** → ERP, QA, fleet management, global sales.
 - **Certifications** → Anthropic Claude API, Model Context Protocol, AI Fluency Framework.
 - **Future programs** → SIT Digital Supply Chain (Sep-Nov 2026).
 - **Recruiter expectations** → Keywords, perception analysis, career ceiling scenarios.
-

♦ 2. Model Layer (Core Engines)

- **CV Tailoring Model** → Generates role-specific CVs.
 - **Cover Letter Generator** → Produces recruiter-aligned cover letters.
 - **LinkedIn Branding Model** → Optimizes headline, About, Skills, Featured.
 - **Certification Mapping Model** → Places Anthropic + SIT programs strategically.
-

♦ 3. Agent Layer (Microservices)

Each agent acts like a microservice, refining outputs from the models:

1. **Profile Audit Agent** → LinkedIn line-by-line audit.
2. **Recruiter Keyword Agent** → Skills section optimization.
3. **Career Path Agent** → Mid-tier vs senior leadership scenarios.
4. **Showcase Agent** → Featured Section layout.
5. **Headline Agent** → Recruiter-optimized headline/tagline.
6. **About Section Agent** → Narrative integration.
7. **Licenses & Certifications Agent** → Structured entries.
8. **Skills Section Agent** → Recruiter-friendly phrasing.
9. **Scenario Planning Agent** → "What if no new courses?" analysis.
10. **Recruiter Perception Agent** → Evaluates recruiter lens.
11. **University Program Agent** → Integrates SIT program.
12. **Certification Placement Agent** → Section placement strategy.
13. **Career Ceiling Agent** → Assesses max achievable roles.

- 14. **Strategic Note Agent** → Leadership advancement recommendations.
 - 15. **Comparison Agent** → Side-by-side career paths.
 - 16. **Featured Section Agent** → Recruiter-friendly Featured layout.
 - 17. **Captions Agent** → Polished captions/link text.
 - 18. **Case Study Agent** → Compiles showcase structure.
 - 19. **Refinement Agent** → Consolidates all outputs into final case study.
-

◆ 4. Orchestration Flow

Input Career Data → Processed by Models → Refined by Agents → Delivered via Presentation Layer.

Flow resembles an enterprise pipeline:

- **Data ingestion** (career history, certifications).
 - **Processing engines** (models).
 - **Microservices orchestration** (agents).
 - **Output delivery** (CVs, LinkedIn, case study showcase).
-

◆ 5. Presentation Layer (Outputs)

- **Recruiter-ready CVs & cover letters.**
- **Optimized LinkedIn profile** (headline, About, Skills, Featured).
- **Case study showcase document** (enterprise-grade architecture + agent outcomes).
- **Scenario maps** (mid-tier vs senior leadership).
